Products-Transaction-Management System

The PTMS system is used to get the products transaction details

- **Input for this System is text file . Text file will be parse it and send the products transaction details to Kafka topic and PostgreSQL data base by using Rest API'S Post method**
- **The Business user can see the Total Transaction Amount of each unique product group code or Client number**
- **By using Postman tool you can get product transactional details as CSV file format or Json Objects.**
